Laser Bullet

Laser Ammo's SureStrike™ system

Laser Ammo's patent-pending SureStrike is a laser bullet system that transforms any fully operational pistol into a laser emitting dry-fire training system within a few seconds. With dimensions similar to those of a standard ammunition cartridge, the SureStrike is simply loaded into the weapon's chamber through the breech with no need to modify the firearm or interfere with any mounted accessory.

How does it work?

By pulling the trigger, the direct impact of the firing pin activates the SureStrike to emit a **microprocessor controlled** eye-safe laser pulse, a "shot" of red light, which simulates the point of impact where a bullet fired from the weapon would have struck.

Taking the "Dry" Out of Dry Fire Training

Dry fire training - repeated drawing, aiming and firing without ammunition - is a practical, convenient way to improve and/or maintain shooting technique skills. However, the practice is limited by the fact that the bullet impact point is a mere assumption. The clear feedback provided by the SureStrike followed by quick self correction, turns dry fire practice into a powerful learning experience with dramatic results regarding flinching, trigger operation, target acquisition, marksmanship and more. Ingraining the shooter's "muscle memory" has never been so easy

Anytime, Anywhere training means exactly that! The SureStrike allows any level of pistol user to practice totally safe marksmanship and handling drills with an actual weapon in any location, from the basement to the barracks.

UhrSecure™ Safety system

SureStrike acts as a fail-safe device by being secured into the chamber with mandatory use of the safety pipe and nut, preventing the loading of a live round.

The UhrSecure safety system, visually and physically assures the secure nature of the weapon to the user and training staff but **does not interfere with retraction of the slide, holstering or any mounted accessory.** SureStrike contains no explosives of any kind and therefore cannot be discharged by a weapon.

Product Offering

The SureStrike training kit, contains a laser bullet, UhrSecure safety system, quick user guide, battery pack and six reflective targets based on classic law enforcement standards, in a convenient carrying case. Also available are laser bullet adaptors for pistols using 40s&w or 45acp as well as 12, 16 and 20 gauge shotgun adaptors.

Warranty and Specifications

Laser Ammo warranties each **SureStrike** for the early of 5,000 "shots" or one year after date of purchase. A replacement firing cap is available, which is warranted for an additional 5,000 "shots".

Electronics	Computer Microprocessor
Power Source	Silver oxide dry cell batteries
Construction	Aircraft grade aluminum 7075
Laser Spec	Class 3a, Up to 5mW 635-650nm wavelength
Safety	Lead free, eye safe (meeting US and EU regulations)
